MicroSPECT: [^{125}I] βCIT binding in rat brain

Horizontal

Coronal

Sagittal

HG – Harderian Glands CP – Caudate Putamen TY – Thyroid

Pharmacological Displacement of [¹²⁵I]βCIT

Cain et al., 2009; *Epilepsia*

Radioligand Binding

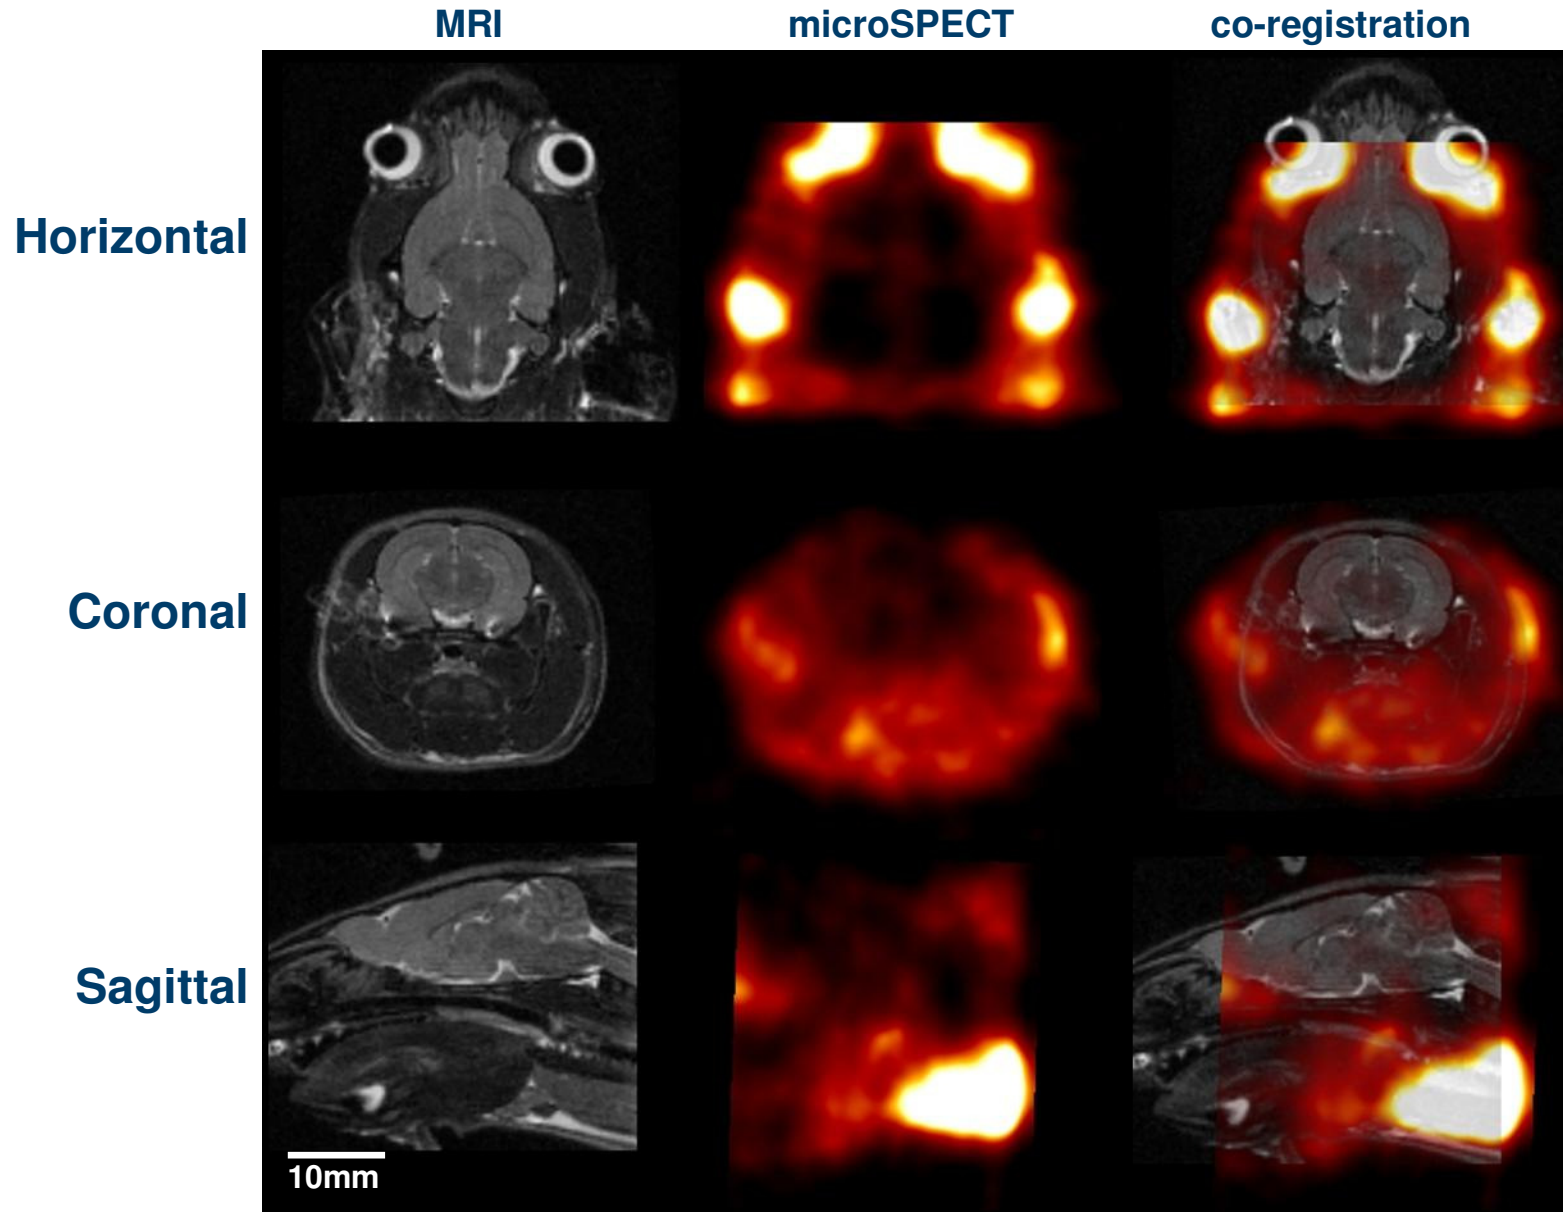

Radioligand	K_d (nM)	B_{max} (fmol/mg protein)	n number
[¹²⁵ I]Compound 1	6.9 ± 1.3	508.6 ± 34.9	9

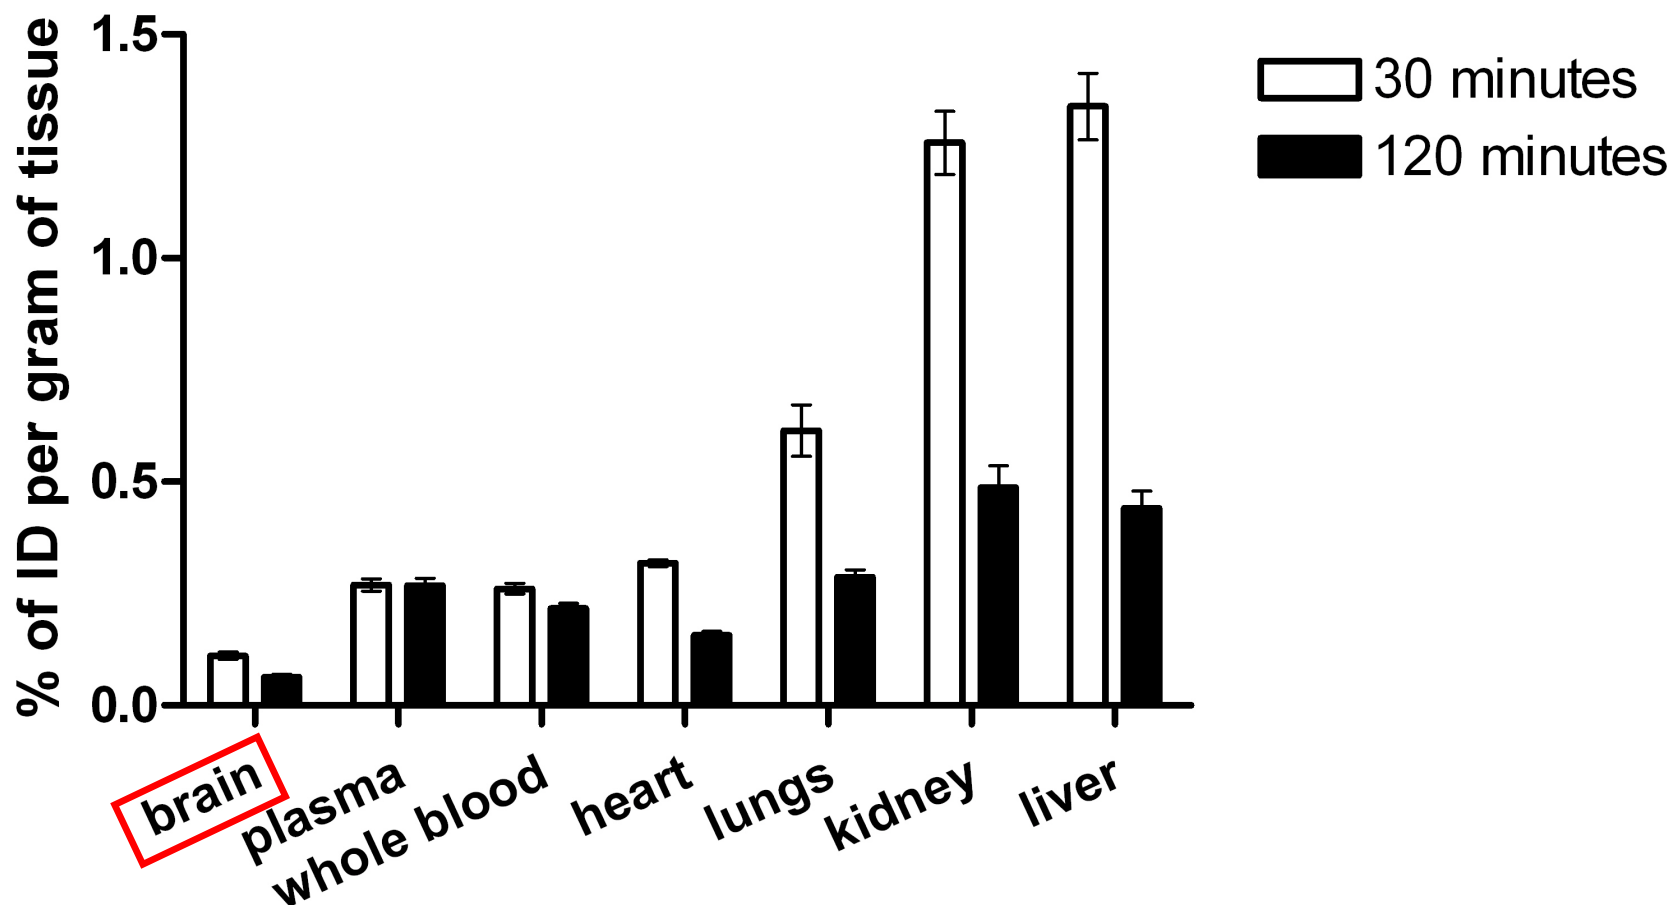

Receptor Autoradiography

Lipophilicity

- [¹²⁵I] Compound 1 Log P = 1.59 ± 0.28 (n = 3)
- [¹²⁵I] Compound 1 Log D 7.4 = 1.64 ± 0.27 (n = 3)

*Measured *ex vivo* by dissection and gamma scintillation

(n = 5 for brain, plasma and blood; n = 3 for all other organs)

$[^{125}\text{I}]\beta\text{CIT}$

Good imageability, microSPECT allows us to perform *in vivo* pharmacological displacement studies

$[^{125}\text{I}]\text{Compound 1}$

microSPECT enables decision making about the potential of tracers for clinical development
